PetBrew should not be used where efficacy of medication will be reduced by low pH. Efficacy of PetBrew may be reduced by the presence of antibiotics. Where antibiotics are being used, separate the use of PetBrew from the antibiotics with as much time as is practical

Adverse Effects

No known adverse effects

Interactions

No known interactions

Overdose

In cases of overdose provide plenty of fresh water and access to toileting area.

Technical fact sheet

PetBrew Small animal live probiotic

Actions

Probiotic micro-organisms competitively exclude potential pathogenic micro-organisms. The production of bacteriocins and bacteriocin like substances can directly inhibit some disease causing organisms.

Metabolism and Elimination

All components are readily digestible as food and digested and eliminated via usual means.

Pharmaceutical Precautions

Shelf life

Shelf life is 8 months from production.

Once opened use within 3 weeks

Special Precautions for Storage

Store below 25°C and above 5°C.

Store in the original packaging.

Keep out of direct sunlight
